## The CUBE AMS HYBRID ONE44 - Engineered for good times

*CUBE launches a brand new e-mtb with Bosch's SX drive system, combining low weight with hybrid power and superb trail-taming performance.*

Pedal assistance and mountain biking go together naturally. Now, with the AMS Hybrid ONE44, CUBE has matched advanced carbon frame construction with the lightweight, versatile Bosch SX drive system to create the ultimate trail bike. Premium C:68X<sup>®</sup> carbon builds into a frame that weighs just 2100g, but still comes complete with an angle adjustment headset and an UDH hanger. That means more miles, more smiles and a whole lot more good times.

There are four models in the range. Two feature an ultralight specification for pace with power. And two are kitted out for maximum trail performance: mountain taming, on tap.

The AMS Hybrid ONE44 C:68X SLX 400X 29 combines the reliability of Shimano's legendary XT components with Fox suspension to create a versatile, agile machine capable of dissecting any trail at speed.

For the ultimate in lightweight e-mtb performance, the AMS Hybrid ONE44 C:68X SLT 400X 29 maxes out the premium spec sheet with Shimano XTR, a CUBE Carbon Cockpit, Newmen Advanced SL A.30 wheels and Fox Float Factory suspension.

Looking for something with a little extra ruggedness? The AMS Hybrid ONE44 C:68X TM 400X 29 will fit the bill. With its Sram Eagle AXS Transmission and Fox Float Performance shock and fork, it's ready for any mountain adventure.

And finally, there's the AMS Hybrid ONE44 C:68X SUPER TM 400X 29. Blending light weight with ultimate trail performance, it features Fox Float Factory suspension, a CUBE Carbon Cockpit, Sram XX Eagle AXS Transmission components with an e\*thirteen Race Carbon Crank and Magura MT Trail Carbon brakes.

There's an integrated 400Wh battery and controller, and it's PowerMore ready for an additional 250Wh of range-extending juice. The Bosch SX system – featured here for the first time in a CUBE bike – delivers game-changing performance including significantly lower weight, up to 55Nm of torque and 50% less pedal resistance for a natural-feeling pedal stroke.

Models: AMS Hybrid ONE44 C:68X SLX 400X 29, AMS Hybrid ONE44 C:68X TM 400X 29, AMS Hybrid ONE44 C:68X SLT 400X 29, AMS Hybrid ONE44 C:68X SUPER TM 400X 29
