

27. August 2025

New bikes. Same passion.

The CUBE 2026 product range is here, and it's rather special. Combining bold design with the brand's legendary attention to detail, there's something for every rider. From urban travel to road racing and e-bike touring to off-road exploration, the new lineup is made to inspire.

Few things enthuse CUBE's product designers and engineers more than constant improvement. From the in-house test lab to the development of new paint processes, it's all about building things that aren't just *new*, but *better*. You could call it a passion. And that passion runs through the entire 2026 range.

The brand new **AMS Hybrid 177** combines CUBE lightweight carbon frame tech with Bosch CX and CX-R power to create an Alp-taming full suspension e-bike. Featuring 170mm of travel, premium components and a 600Wh battery, it has the power and torque to free its rider from the tyranny of the lift queue for hours of gravity-fuelled fun.

Gravel riders, meanwhile, get updated **Nuroad Race** and **SLX** models, which channel the elegantly minimalist aesthetic of CUBE's carbon C:62® Nuroad frames into sleek High Performance Aluminium form. Blending the looks of a road race machine with the practicality of SIC 2.0 rear carrier compatibility and clearance for 50mm tyres, they redefine go-anywhere versatility. The race-focused **Nuroad C:62 EXC**, **Race** and **SLT** bikes also get power meter cranks.

We know that small details are important, and marginal gains matter – particularly in racing. That's why both the **Litening C:68X AIR SLT** and **Nuroad C:62 SLT** feature a new one-piece carbon cockpit design with integrated computer mount. Featuring a 2 degree outswEEP and 6 degree flare, the aero top section saves up to 8 watts to help you shave seconds off your time, whether it's on road or gravel.

Completely new for 2026, the **Kathmandu Hybrid ONE11** brings full suspension to CUBE's popular e-bike tourer for the first time. Compact suspension design with an integrated shock, clever kinematics and a full complement of accessories with Bosch power make adventurous routes and rougher roads more accessible – and more comfortable – than ever before.

Trail riders will be pleased that the ever-popular **Stereo Hybrid ONE44** series has had some carefully considered component tweaks. Highlights on selected models include Continental tyres and Shimano XT hydraulic disc brakes with ABS Pro, while the Evo version also features Shimano's brand new XT Di2 wireless gears for flawlessly precise shifts.

Urban transport also gets an upgrade, in the form of a revised **Cargo Hybrid** lineup. This versatile workhorse now has a smaller turning radius for better handling, lockable storage compartment and an updated frame design incorporating the latest Bosch BDU 38 motor mount.

Young riders haven't been forgotten, either. The versatile *Numove* series gets a *Walk* balance bike model with 12 inch wheels and *Disc* versions with either 20 or 24 inch wheels, so there's a model for every youngster.

The CUBE product line also includes a comprehensive range of accessories and clothing covering the gamut of riding styles. From the road SPD-SL-compatible *ACID CLICK K1-CB* to the mtb-suitable *ACID FLAT A17-1B* pedals, and from the urban travel-focussed *ACID CITY 10 All In One Pannier Bag* to the *ACID Pro 0.6 Frame Bag* for the road race Attain series, CUBE has an accessory for every purpose. Plus, for 2026, nearly every e-bike now has *X-Connect* compatibility for plug-and-play attachment of an ACID front light.

Launch date for the new range of bikes and accessories is 3rd September 2025. It's a Wednesday. Another hump day, but with a difference: an injection of pure, two-wheeled excitement.

New bikes. Same passion. It's a winning combination.
