

CUBE 2027

The next chapter

The CUBE 2027 product range is here. For us, it represents the next chapter of our story. And that story is both about riding bikes, and making bikes and accessories that ride better in every way. That's because constant improvement is what drives us. Better means more freedom. More speed. More adventure. More fun. More of all the good things, because that's what bike riding represents. For us, and for our customers.

The next chapter of speed

Speed is crucial in racing, but it doesn't come free. So we completely reworked the **Litening AERO** series for 2027, beginning by shaving 150g off the weight of the C:68X® carbon frame and fork. Then we fine-tuned the tube profiles, to make it even more aero. Combined with a one-piece IC Aero Max cockpit, the new model is now 6 watts more efficient. Add a carbon seatpost with increased flex and a built-in power meter, and we've created the perfect tool to smash through the wall of air in front of the rider, faster.

The next chapter of adventure

The all-new 2027 Stereo HPC and Stereo C:62 series are trail bikes to inspire intrepid riders. Featuring 150mm front- and 145mm rear-wheel travel, we included room for longer dropper posts as well as an adaptable down tube storage system and a modular device mount... because adventure can lead to new and unexpected places.

For riders who prefer gravel to rocks, the 2027 Nuroad series covers all the bases from adventure to race and everything in between – including a brand-new Nuroad ONE model. Frame options include High Performance Aluminium and C:62® carbon, while components cover the gamut from fully equipped with mudguards and carrier, to race-focused variants complete with power meters and IC Aero carbon cockpit.

Freedom means different things to different people, so we also completely reworked our rugged Aim series. Built to go anywhere, its High Performance Aluminium frame features joints so smooth, one tube almost flows into the next. But it's practical, too, with full dropper post compatibility – and the Fully Equipped versions are ready for everything from the daily commute to a longer tour.

The next chapter of gravity

Gravity sucks. Literally. But we've been putting it to work. The brand-new **Fritzz** combines a C:62® carbon frame and 170mm travel with a high-pivot set-up to help flatten even the rowdiest of trails. It also features customisable set-up options, including cable routing and adjustable geometry, and there's a modular device mount and adaptable down tube storage.

We also gave our dedicated gravity bike, the **TW015**, a total makeover. The same kind of high-pivot system as its enduro stablemate gives it supple, tuneable, mountain-flattening kinematics with 200mm travel. There's a ton of rider-adjustable features – from wheel size and geometry to shock progression – to get it dialled in just-so. It's one helluva ride.

The next chapter of freedom

The updated and redesigned 2027 **Fold Hybrid** series makes travelling with and storing a bike as simple as pushing a button. With a revised fold mechanism and more ergonomic carry handle for 2027, it's easier than ever to take anywhere. Bosch pedal assistance, quick and easy handlebar and saddle adjustments plus adaptable luggage carrying options mean it's one bike for every rider.

Urbanites who prefer a more traditional ride will appreciate the new **Editor Hybrid 360 FE** series. Beneath its elegantly understated exterior is a 360Wh battery and a discreet, quiet and powerful Bosch hub drive for almost effortless city riding. Fully equipped for the daily commute and more, it's the ideal way to reclaim the streets.

The next chapter of power

We're proud that the **Stereo Hybrid ONE44** series has opened up trail riding for so many. So for 2027 we've given the entire range a component makeover... and added even more models, so that every rider can find their perfect match. Our popular trail bike just got even better.

There's also the brand new **Nuride Hybrid ONE11**, which combines the comfort of 100mm suspension at both ends with the practicality of a fully equipped tourer, plus the power of Bosch's CX motor with an 800Wh battery. It's a bike that's designed to create new experiences.

The next chapter of everything

The CUBE product line also includes a comprehensive range of accessories and clothing to cover every riding scenario. From comfortable MIPS helmets to a brand-new eyewear range, from practical panniers and bags to a new line-up of child seats, or from X-Connect-compatible front lights to a range of compact pumps and tools, there's something for every rider.

Launch date for the new range of bikes and accessories is 12th August 2026. Sure, it's a Wednesday – just another hump day.

But also, it's the start of the next chapter: cube.eu/2027
